

## For loosening really tough screw connections **The extractor set 1/2" and the 2C reversible ratchets by GEDORE red**

If bolts or screw heads are heavily rusted, deformed or rounded, then special tools are required. And for these cases, **GEDORE red** offers the **Extractor set 1/2" R68003010**. It will loosen even the very toughest screw connections when everything else has failed. The special inserts are driven by the strong, stable GEDORE red ratchets such as the **offset version 1/2" R60050009** or the **Swivel head reversible ratchet 1/2" R60120027**. These will allow the user to work effortlessly even in hard-to-reach areas, and any problem case can be solved in no time at all.

The 10-piece **Extractor set 1/2" R68003010 (highlight in the current IMPULSE promotion €71.42 including VAT)** was developed specifically for screwdriving applications where conventional tools don't have a chance. The innovatively designed tapered spiral profile is rotated anticlockwise into the defective screw head and cuts in, independently and firmly. This provides a solution even in seriously stuck problem cases.

The impact mandrel included in the set then ensures that the faulty screw head is easily removed from the extractor. The set contains nine inserts in key widths 10 to 19 mm with female square drive to cover all the most common sizes. Housed in the practical plastic box, the components in the kit are all stored safely and clearly. The labelling of the individual key widths also aids efficient working, since the user no longer has to waste time looking for the right item. The inserts are made of chrome molybdenum steel.

If the faulty screw heads are also in a confined or hard-to-reach installation space, the special 2C swivel ratchets with an offset handle or the swivel head by GEDORE red are perfect for working with the extractor set.

For deep-seated screw connections, the GEDORE red range includes tools such as the **2C reversible ratchet 1/2" R60050009 (offer price in the current IMPULSE promotion €27.25 € including VAT)**. If a flexible screwdriving tool is required, the **Articulated reversible ratchet 1/2" R60120027 (offer price in the current IMPULSE promotion €45.10 including VAT)** is the solution. This has a swivel head that locks in five positions over a radius of 180°. So the ratchet easily adapts to the particular area of application.

The two GEDORE red ratchets both have a 2-component handle. The ergonomic handle design ensures that the power transmission is kind to the hand, which helps to prevent signs of tiredness when working. Furthermore, both versions have an oval head that further eases working in tight spaces and offers greater leeway when swivelling. The ratchets switch over from clockwise to anticlockwise operation at the touch of a lever. The lever is sunk into the head to prevent unintentional adjustment while working. The ball locking device provides a fixed connection between the tool and the bit while the ratchet is being used.

The reversible ratchets also have a push button release, which makes it easy to release inserts or connecting parts. Made of high-quality chrome-vanadium steel and with a matt satin finish, GEDORE red ratchets are extremely durable and stable.
