

LED rechargeable spotlight and mini work lamp new in the GEDORE red range Universal and flexible lighting for the construction site and DIY projects

Remscheid, 27.04.2023 – *The optimum illumination of all areas on the construction site or during renovation projects will make working there safer and more efficient. For the illumination of any corner, even hard-to-reach ones, GEDORE red presents the new practical LED rechargeable spotlight and the compact Mini work lamp. Both are extremely flexible to use, and adapt easily and wirelessly to a wide range of applications. Making them practical and reliable light sources at work that last for several hours.*

The **LED rechargeable spotlight R95400145 (special price in the latest IMPULSE promotion € 35.49 including VAT)** has a luminosity of 1400 lm that can be halved when required. The spotlight also has a retaining bracket that rotates by 180° for easy alignment and hanging. Ensuring that any work area is perfectly illuminated. Splash-proof and designed to be shock-resistant thanks to the rubberised framing, the spotlight can cope with even highly robust environments and adjusts easily to meet a range of working conditions.

The spotlight's powerful Li-Ion battery is charged via a micro USB, and provides up to six hours of light without any kind of power supply. The remaining charge is clearly visible at all times on the charge control indicator so it can be recharged in good time when necessary. Another advantage: the spotlight can also be used as a power bank for other devices. The flat design ensures it packs away neatly after work.

The practical design of the **Mini work lamp R95700089 (special price in the current IMPULSE promotion € 26.89 including VAT)** makes it a useful mobile companion. While in use, it offers plenty of flexibility both when mounting and in adjustment. With a fastening clip on the back and a magnet on the underside so the hands remain free when working and even angled areas can be illuminated. The compact design also supports the illumination of confined locations.

The lamp adjusts in three positions to 100 lm, 300 lm and – briefly, using the boost function – to 500 lm. The Li-Ion rechargeable battery provides up to three hours' illumination, and charges via micro USB. The lamp can easily be stored anywhere when not required.
